## Customizing Your Social Media Images

We've created three different social media images for you to use. Two are for posting, which are the square and 1920x1080 images, and the third one is for use on Instagram and Facebook stories. You may notice that there are two of each type of image. One of them is for you to customize! We've provided space at the bottom for you to add your logo and booth number. You can see how this can be done in the example to the right.

If you do not have access to software that will allow you to edit these templates by adding images and text, there are plenty of free options available for you online. One example of this is **Canva**, which just requires an email address to sign up for a free account.

### Here are the steps that you would take to customize your image on Canva.

1. Once you've created your free account, click on the purple button in the upper right corner that says "Create a design."
2. You will see suggested options for your design, but since you already have your template, click on "Import File" at the bottom of the drop-down menu.
3. When you have uploaded your file, you will see the option to "Use in a new design." Select that option, and click the first option that says "Custom size." You will see the dimensions from your upload already entered, so just click on "Create new design."
4. To add your logo, find the icon that says "Uploads" on the lefthand side of the screen. You can either press the "Upload files" button to select your logo, or you can drag and drop the file into the space that should now contain a small version of the template you uploaded. We recommend using a high resolution .jpg or .png.
5. Click on the logo to add it to your design space. Do not drag it into the design space, or that will replace the entire image. Once it's in the design space, you can grab it at the corner to scale it down or up, and grab the center to move it into the space at the bottom of the template.
6. Now you can add your text. Click on the "Add a text box" button on the upper lefthand side of the screen. Like with the logo, you can grab and drag the text box to where you want. When you click on it, enter the text that you want for the graphic. We recommend using the font "Open Sans," which you can choose in the font selection at the top of the design space. Use the + and - buttons next to the font to size your text.
7. When your image is ready, click on "Share" in the upper right corner and select "Download" from the dropdown menu. Select either JPG or PNG, and then click on the "Download" button.
8. Now you're ready to share your customized image on social media!
